

It's electric!

1. Design a leaflet to encourage people to use energy efficient light bulbs and to switch off lights in empty rooms. Remember to include subheadings, bullet points, illustrations and captions.

These pictures and facts might help you.

FACT FILE

- Energy saving light bulbs use up to 80% less electricity than standard light bulbs but produce the same amount of light.
- If our homes are fitted with energy saving light bulbs they produce less carbon dioxide.
- Energy saving light bulbs can last up to ten times longer than a standard light bulb.
- Wattage is the way we describe an amount of electric power because a watt is a unit or measurement of electric power.

2. What's the difference between a fact and an opinion? Can you write one fact and one opinion about energy saving light bulbs?
3. Make up a short radio or TV advertisement to persuade people to buy your new, wonderful energy saving light bulb.
4. Can you think of five things in your home that are powered by electricity and explain what you use them for?
5. What were light bulbs like when they were first invented? See if you can find out.
